

Building High-Performance Infrastructure for a Connected World

Built to support the speed, scale,
and complexity behind today's
digital infrastructure.

Grounded in our values of commitment, integrity,
and reliability, and backed by over 100 years
of experience, Graham partners with clients to
design and deliver high-quality, safe, mission-
critical facilities that meet the performance
expectations of an always-on world.

INDUSTRIES

High-Performance Computing (HPC)

Large-scale campus supporting rapid cloud growth

- Accelerated delivery through fast-track, phased execution
- Delivered high-redundancy power and cooling systems, including substations and cooling infrastructure
- Enabled scalable expansion to support future growth

Mission-Critical Facility Expansion

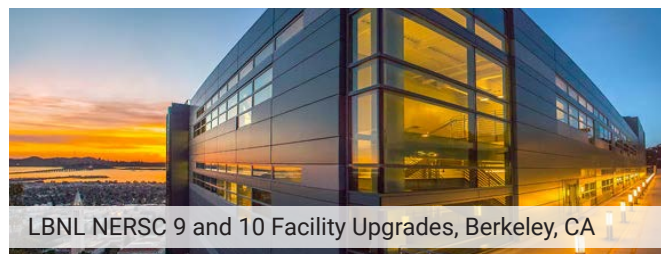

Expansion within an active, fully operational environment

- Maintained operations within an active data center environment
- Upgraded cooling and monitoring systems to increase capacity
- Managed complex phasing within constrained site conditions

Advanced Technology Facility

Specialized high-performance facility

- Delivered complex technical scopes at a 140,000 SF computing facility
- Coordinated building systems to ensure performance
- Reduced delivery risk through disciplined execution

LBNL NERSC 9 and 10 Facility Upgrades, Berkeley, CA

USPS Data Center Expansion, California

PDL Biopharma - Redwood City, CA
